RSS Feeds Still Popular for Accessing News Headlines

When it comes to keeping up to date with the latest headlines, Really Simple Syndication (RSS) feeds are still a widely used method of getting the news, despite alternative platforms gaining in popularity.

Now that Facebook has overtaken Google as the world's largest website, and Twitter continues to make good progress, some commentators are wondering if the vogue for referencing news via social media networks means the RSS feed has had its day.

In many cases, users prefer loading RSS feeds on their own readers (such as Google Reader) because they can aggregate and browse headlines from their favourite news sites conveniently in one place.

Making sense of multiple news sources is a speciality of global news navigator www.OneNewsPage.com. It distils the latest news from thousands of trusted providers into the most relevant headlines in its "Top News" section.

Conveniently, One News Page provides an RSS feed featuring the "Top News" headlines of the hour. To view and access these headlines within their favourite RSS reader, users only need to add the "Top News RSS Feed" as a source. The feed address is <http://www.onenewspage.com/topnewsRSS.php>.

Dr Marc Pinter-Krainer, the CEO of One News Page, comments:

"People who want to subscribe to our Top News RSS feed can simply add <http://www.onenewspage.com/topnewsRSS.php> as a source to their favourite RSS reader. It's that simple. We've already done the hard work by monitoring and ordering the latest news from thousands of trusted sources globally, enabling our RSS subscribers to browse and access the most important headlines of the hour,
